(57) **ABSTRACT**

A system for managing female incontinence includes a body  
of biocompatible material configured to fit between the labia  
minora and the vestibule floor, the body having a surface  
configured to occlude the urethral meatus, an adhesive carried  
on at least a first portion of the surface and configured to  
provide a sealing engagement between the body and the ure-  
thral meatus, and a substance carried by at least one of the  
body and the adhesive and configured for controlling the odor  
of the general vaginal-urethral area of a female.
